SELDON CORE ENTERPRISE

Why choose Seldon Core Enterprise?

Seldon Core Enterprise provides access to cutting-edge, globally tested and trusted open source MLOps software with the reassurance of enterprise-level support.

Seldon Core is an industry-leading technology trusted by a broad community of developers. It has been deployed across hundreds of organisations for thousands of different use cases, driven by the community to provide a robust solution.

Seldon Core Enterprise makes it faster and easier for businesses to deploy ML models and experiments at scale with the reassurance and security of the additional layer of enterprise support.

The platform is flexible and can fit into any IT infrastructure across clouds and on-prem, as it is both framework and platform agnostic, meaning organisations can avoid being locked into solutions from a single vendor.

Seldon Core stats:

5m+	100k+	10k+	2k+
INSTALLATIONS	ACTIVE NODES	ACTIVE CLUSTERS	STARS ON GITGUB

We love Open Source software but adoption isn't free from challenges:

1. Specific expertise needed	2. Warranties and liabilities	3. Hidden costs	4. Support
Can be difficult to install or lack user-friendly interfaces that can limit uptake across your team.	Popular OSS licenses do not provide any warranty.	All software has costs to run in production including staff training, systems integration and customisations.	You can self manage open-source software and rely upon community support, but this comes with a higher risk of unplanned downtime or delays.

What is Seldon Core Enterprise?

Seldon Core Enterprise enables organisations to extend **'enterprise-readiness'** to every one of their machine learning models. This means:

- A full SLA providing **support and resources to address any issue**

- An **enterprise-grade warranty** and **vendor support**

- **Direct, expert support from the developers** behind Seldon Core

- A **dedicated Account Manager** to track every issue through to full resolution.

Seldon Core Enterprise provides total peace of mind for your mission critical ML deployments.

Who is Seldon Core Enterprise for?

Seldon Core Enterprise is designed for any organisation – those already using Seldon Core, or who are considering adding it to their tech stack.

Seldon Core Enterprise is for organisations requiring:

- **Coverage across any number of ML models** deployed plus **unlimited users**

- **Additional assurances** for models in staging and production

- **Confidence** that their **ML model deployments** are **supported and protected.**

The Seldon platform

Seldon is designed to simplify and accelerate the process of deploying and managing your machine learning models. Seldon bridges the gap between your data science and DevOps teams so you can bring models to market faster.

Seldon's products have already helped to bring more than one million unique ML models to production. Seldon users report productivity gains of up to 92%, saving tens of millions of dollars on their machine learning projects.

Seldon's product range also includes powerful tools to manage and explain your models. Your data science team can quickly verify deployments are working correctly, monitor and review potential issues in performance and better target future development and investment for maximised returns.

Seldon Technologies Ltd was founded in 2014 with a simple yet ambitious aim: accelerate the adoption of machine learning to solve some of the world's most challenging problems. Since then we have attracted over £10m in venture funding, allowing us to build a community of highly-talented ML experts dedicated to solving the challenges faced by every organisation working with machine learning and AI.
